A. Where imputed values land (grey: observed intensities)

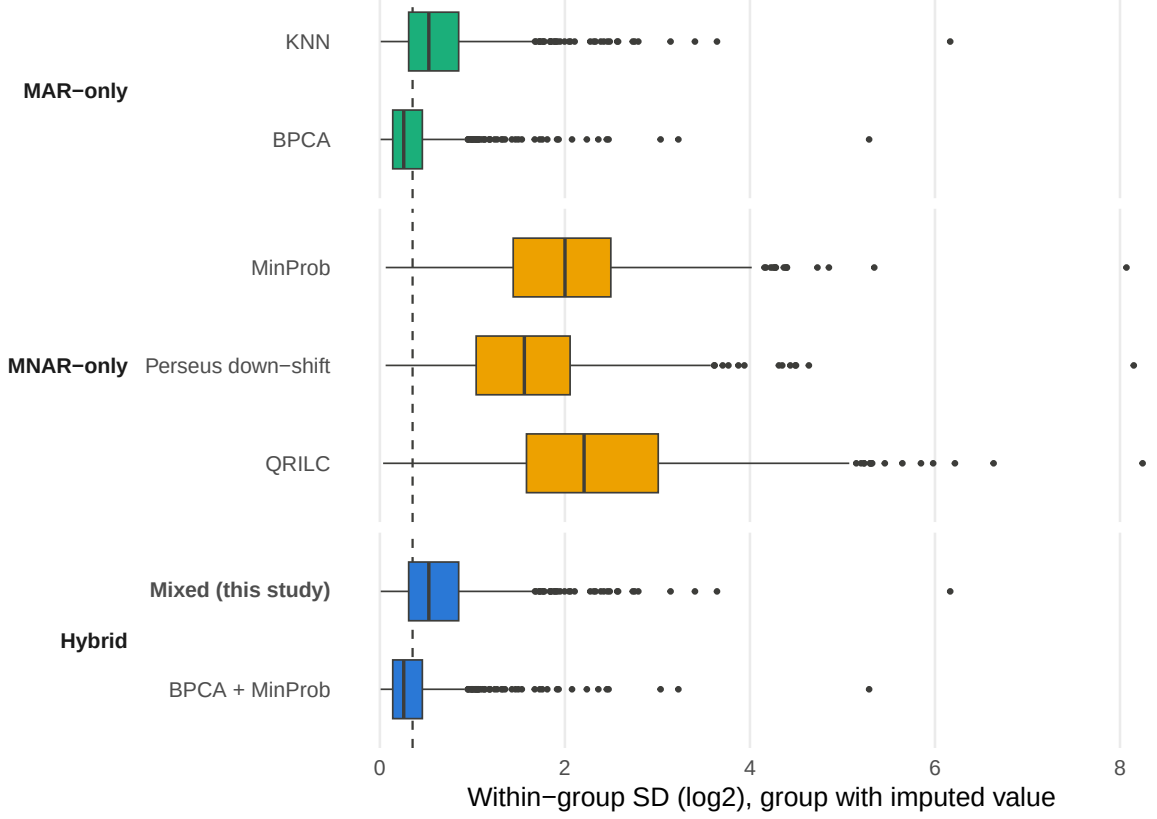

B. KNN shrinks MNAR fold−changes (n = 193)

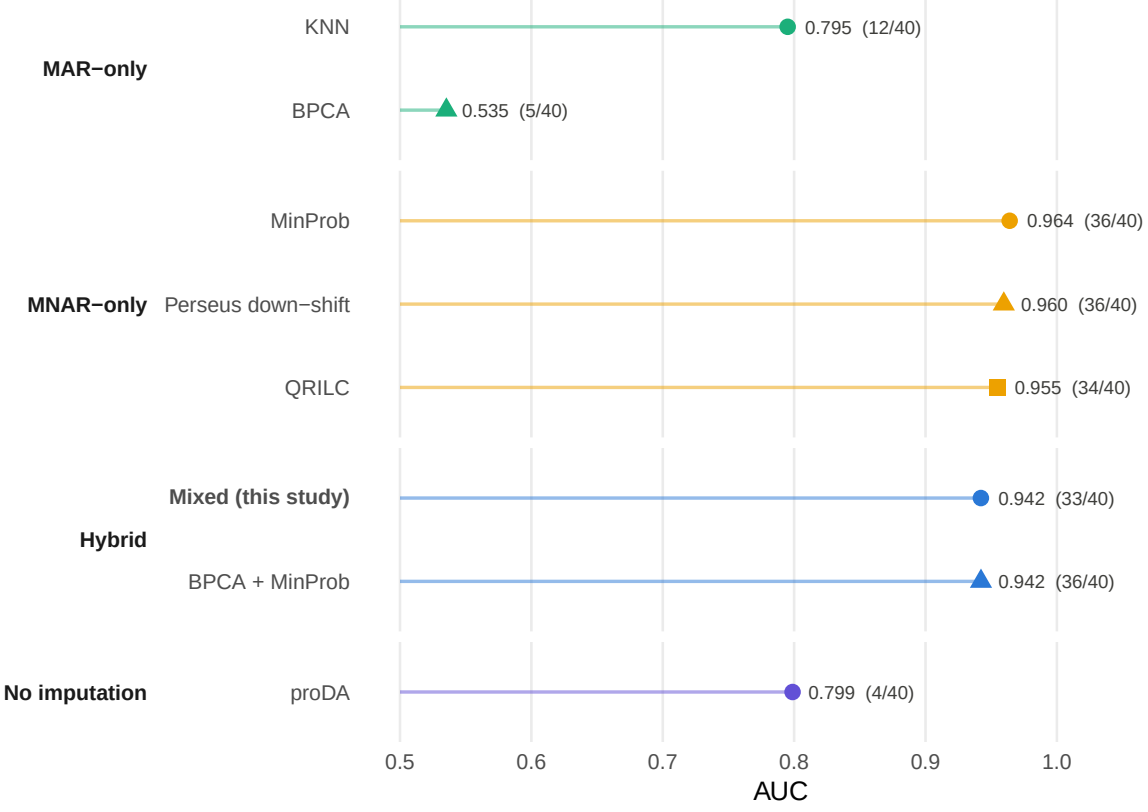

C. MAR replicate spread (n = 765)

dashed: median for proteins with no missing values

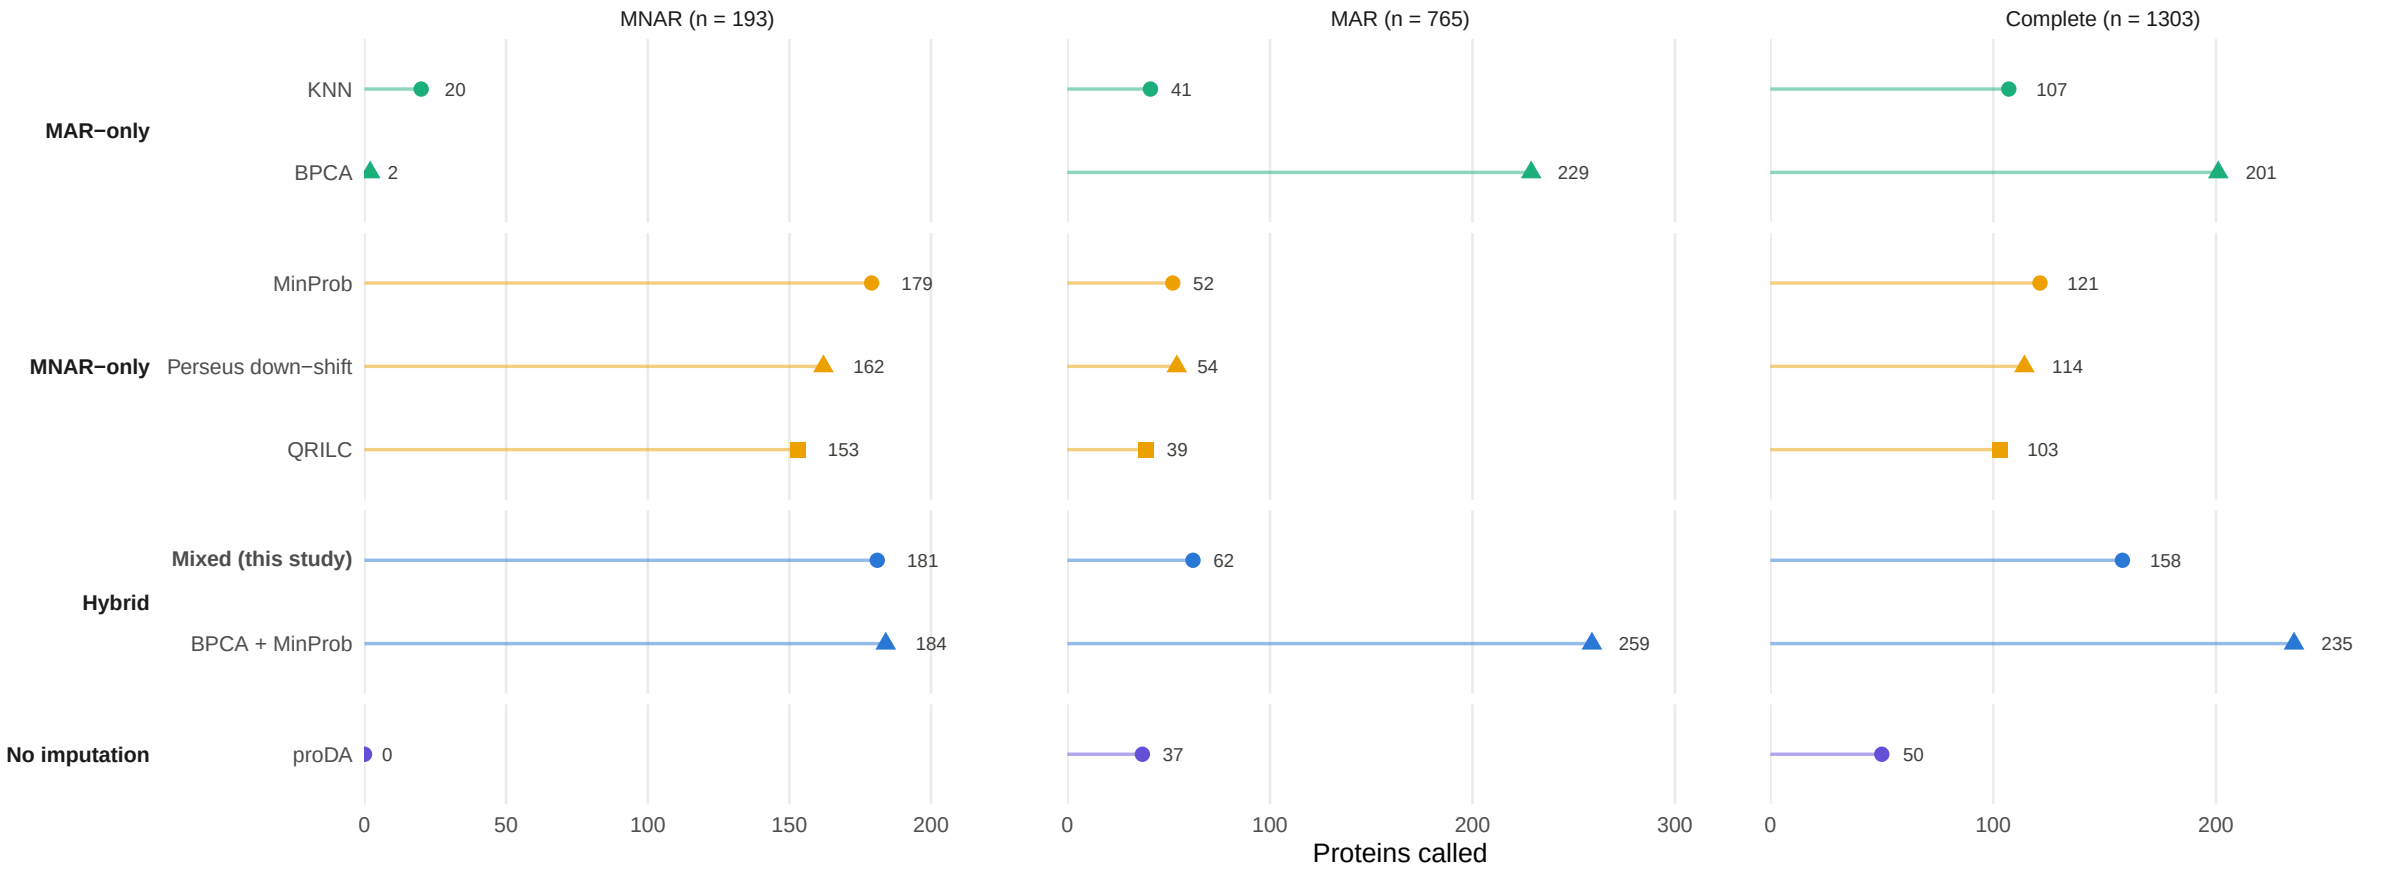

E. Recovery of interactors confirmed by spectral counts

AUC (called/total): 40 count−branch interactors vs 2058 background proteins

D. Proteins called by missingness class

adj. p <= 0.05 and |log2FC| > 0.25 (limma; proDA uses its own test)

F. Masking test: error when re−imputing observed values

10 repeats on fully quantified proteins; tick and label = median
